PROJECTS

Blood Donation Management System

This is a blood donation management System. Through this, donors will be available in all parts of the country and blood can be easily managed on an emergency basis. I think this is a very helpful project for everyone. I have used it in PHP MySQL.

Science Club Management System

This is a club project where club members have data and user profile can be easily created and managed efficiently. All the updates of the company are easily available and the admin can easily manage the company digitally.
